Publishers

This page describes the features available from version 1.9 - see Publishers (pre-1.9) for older versions

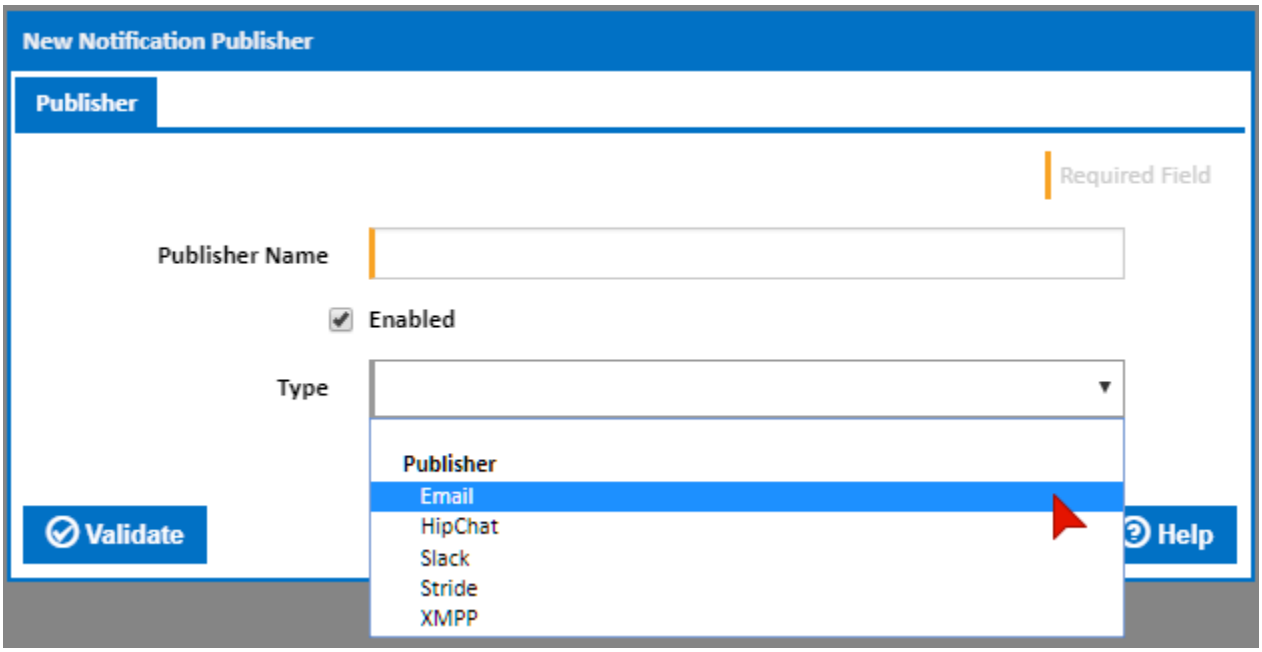

Publishers define how notifications are sent to users. Continua CI includes a set of publisher types: Email, HipChat, Mattermost, Slack, Stride, XMPP and private message.

Administrators can configure publisher settings on the Publishers page in the Administration area.

This shows a list of the publishers that you have configured. Metrics are shown next to each publisher giving statistical details on the throughput of its messages.

Default publishers are already added for Email and XMPP. You can edit these using the 'Edit' button and/or add new publishers of these or other types using the 'Create' button.

Navigate to the following child pages for information on each of the publisher types that you can set up on this page

- Email
- HipChat
- Mattermost
- Slack
- Stride
- XMPP
